

## Utility Buckets

Utility Bucket - "Slip on the forks" attachment buckets or otherwise called Universal Fit buckets could be used together with whichever model or design of extendable reach forklift. If your unit can't be matched with a quick-tach component, another brand new or second-hand universal fit bucket can be located in its place. Typical universal forklift buckets attach to blades that are up to 6" wide and are 48" long. Bigger fork pockets can be ordered via an account executive upon request.

For the reason that universal fit lift truck buckets slip onto the forks directly, they stay on the machine and are a lot less vulnerable to damage. These buckets are also 50 percent deeper as opposed to the quick-tach bucket models. This extra room makes them ideal for lifting irregular shaped loads like for instance broken up concrete, backfilling behind walls, tearing off roof trash, elevating roof gravel and moving large debris piles.

### Quick-Tach Buckets

Additionally, constructed as attachments for extendable-reach forklifts, Quick-Tach buckets, are made to tolerate the positioning of materials far beyond the normal reach of the loader. A hardened beveled cutting blade on the leading edge and on both sides reinforces stability, resistance to wear and provides supreme durability. Quick-Tach lift truck buckets are reinforced by scuff bars along the base of the unit which protect it from abrasion.

Quick-Tach forklift buckets can be used to replace the carriage and forks that weigh between one hundred to seven hundred pounds. Once set up, these buckets free up more of the unit's cargo capacity, enabling it to handle heavier and bigger items. The Quick-Tach can pour stuff approximately 1.5 feet higher due to the shorter depth of its bucket. These buckets are built in a customized fashion in order to suit the specifications of specific makes and models of lifts. It is essential to consult a construction equipment specialist so as to find the customized Quick-Tach bucket solution for your needs.

Forklift bucket attachments are great for construction work on the ground level. They can be utilized in order to transfer snow in the northern regions, gravel and also sand. Clean-up on the jobsite can be even be completed using a forklift bucket. The many applications the bucket could do saves the company much time and money in view of the fact that it does need to entirely switch tools or equipment and this can help prevent running into overtime.
